

### File Edit Utility™

FEU is the world's leading iSeries database tool, and provides a single integrated solution for accessing any database file and many other objects. FEU offers an easy and secure way to find, view, and change selected data. With a vast array of capabilities, it's no wonder users continue to tell us they "use FEU every day."

#### File Edit Utility™: More Than Two Decades of Innovation

FEU is the original database tool for the midrange systems, first introduced in 1984 and redeveloped in 1988 for the AS/400. FEU makes it easy to work with data without any programming or setup time. Continually updated, FEU is an extremely popular productivity tool and is relied upon by thousands of iSeries professionals in more than 100 countries around the world.

#### Overview

FEU was designed to enable the viewing of data in whatever manner desired without the limitations of DFU or the need to write special update or "fix-it" programs or scripts. FEU offers quick and easy file inquiry, editing, scanning and printing, as well as complex global file updates, deletions and many specialized functions such as restoring deleted records, exporting data, and converting spool files to PDF, XML or other formats.

#### Instant Access to Data in Many File Types

Besides providing easy access to Physical and Logical Files, FEU also allows access to Join Files, Data Areas, User Spaces, Data Queues, Spool Files, Message Files, and IFS Stream Files - all in your own customized view.

#### Display Modes

FEU allows Browse and Edit modes in single record or multiple-record full screen 80 or 132 column displays. Data can be viewed by field, as raw data, in Hexadecimal format, or in your own specified arrangement of selected fields.

#### File Access and Scanning

FEU provides numerous ways to quickly and easily find or select the desired data. Access is available by key, record, custom key, or through comprehensive boolean search and selection capabilities. Many global operations can be performed with data that matches the provided criteria.

#### Working with Spool Files

With the proper authority, FEU allows spool files in the output queue to be edited. In addition, spool files can be interactively or automatically converted to PDF, HTML, TXT, or XML formats and emailed for easy distribution.

#### Reporting

FEU offers the ability to quickly create customized reports with selected fields, calculated fields, totals and counts. Various cross references, record layouts, and numerous other useful reports are also available.

#### Retrieval of Deleted Records

Records that have been deleted by other programs or users can be selectively restored using FEU's powerful and unique data retrieval capabilities.

#### Security and Auditing Considerations

FEU provides numerous security and tracking & reporting functions to meet your regulatory compliance and auditing needs. Customizable user profiles allow easy restriction of functions, and an audit log file and audit report can log all file maintenance activity. In addition, an UNDO function allows global changes or deletions to be retracted.

#### Many Additional Special Functions

- Data encryption and decryption using AES 128-bit encryption
- Database Relations information and links
- Export of selected data to DB2, XML or CSV format
- Custom file and field subsets
- Global data updates and deletions
- Update a second file based on a first file
- Retrieval of missing database source
- Uppercase and lowercase conversion
- File compare and file merge
- Locate and correct data decimal errors
- Much more

#### Evaluating and Licensing FEU

You may download a free trial or request an evaluation kit at [www.alcsoftware.com/feu](http://www.alcsoftware.com/feu) or by calling Applied Logic. A provided temporary key will activate all of FEU's functions for your evaluation. FEU is not licensed by Processor Group or user, and is available for a one-time license fee of \$995 for a regular license or \$1895 for an LPAR license that allows use in any number of partitions.

#### About Applied Logic

Applied Logic Corporation has been providing specialized software tools and utilities for the AS/400, iSeries and System i platform since 1988, serving thousands of customers in more than 100 countries around the world. Besides FEU, Applied Logic offers the Pro/Encrypt data encryption product, the PDE/400 Change Management solution, and various legacy system conversion aids. In addition to software products, Applied Logic's Professional Services division provides custom software development and conversion services.
